

Monnit Industrial

Wireless High Temperature Sensor

Technical Overview

General Description

The Monnit Industrial RF Wireless High Temperature Sensor uses a glass coated platinum RTD sensor to accurately measure temperatures from -50°C to $+370^{\circ}\text{C}$ (-58°F to 700°F).

Features

- Standard accuracy at 0°C : $\pm 3.3^{\circ}\text{C}$
- Calibrated accuracy at 0°C : $\pm 0.5^{\circ}\text{C}$
- RTD temperature range: -50°C to $+370^{\circ}\text{C}$ (-58°F to 700°F)
- Free iMonnit basic online wireless sensor monitoring and notification system to configure sensors, view data and set alerts via SMS text and email.

Principle of Operation

The Monnit industrial wireless high temperature sensor outputs the ambient temperature in degrees Celsius or Fahrenheit. It is programmed to sleep for a user-given time interval (heartbeat) and then wakeup, power up the RTD sensor and wait for it to stabilize then mathematically compute the temperature and transmit the data to the gateway.

Solar Power Option

Monnit Industrial Sensors are powered by a replaceable 3.6 V battery (included).

An optional solar powered version is also available. The solar powered sensor uses a Lithium Iron Phosphate rechargeable battery in conjunction with a solar power cell, extending the life of the battery.
